Made with **GAMMA**

Introduction & Problem Statement

Businesses generate large amounts of sales and operational data, but converting this data into useful business decisions can be difficult and time-consuming.

Key Challenges

Product Profitability

Difficult to identify profitable and unprofitable products

Time-Consuming Analysis

Manual business analysis takes time

Market & Competitor Analysis

Market and competitor analysis is difficult

Hidden Business Risks

Business risks may remain hidden

Lack of Strategic Direction

Raw data does not directly provide strategic decisions

Raw Business Data

Analysis Challenge

Business Decision

Objectives

Automate Business Data Analysis

Analyze Product & Business Performance

Identify Trends & Anomalies

Perform Financial Analysis

Analyze Market & Competitors

Generate Strategic Recommendations

Provide an Executive-Level Business Report

System Architecture

OpenAI Agents SDK is used for multi-agent orchestration.

Multi-Agent AI System

Business Analysis Agent

- Business data and KPI analysis
- Product performance
- Revenue and profitability

Market Research Agent

- Market trends
- Market opportunities
- Business environment

Competitor Benchmarking Agent

- Competitor comparison
- Pricing and positioning
- Competitive analysis

Financial Analysis Agent

- Costs and margins
- Financial performance
- Profitability

Strategic Recommendations Agent

- Combines analytical findings
- Generates practical recommendations
- Supports management decisions

Data Processing & Business Analysis

CSV/Excel

Validation

Cleaning

KPI
Extraction

Trend
Analysis

Analyzed Metrics

Revenue	Cost
Units Sold	Marketing Spend
Inventory	Product Performance

AI Insights, Risk & Decision Support

The system converts analysis into business intelligence.

AI Analysis Outputs

Best-performing areas

Worst-performing areas

Trends and anomalies

Risk Categories

Financial risks

Market risks

Operational risks

Customer risks

Strategic Recommendations & Action Plan

The system provides practical recommendations instead of only presenting data.

Prioritized Business Actions

Marketing & Inventory
Recommendations

Profitability Improvement

Risk Mitigation

Expected Benefits

KPIs to Monitor

Suggested Timelines

Example Action Roadmap

Immediate Actions

Short-Term Actions

Long-Term Actions

Technologies & Implementation

Python	Core programming and application logic
Streamlit	Interactive web application
OpenAI Agents SDK	Multi-agent AI orchestration
Pandas	Data processing and analysis
Asyncio	Asynchronous agent execution
ReportLab	PDF report generation
CSV/Excel	Business data input

Implementation Flow

Conclusion & Future Scope

Key Outcomes

- Automates business analysis
- Coordinates multiple specialized AI agents
- Converts business data into actionable insights
- Provides risk assessment and strategic recommendations
- Generates executive-ready reports

Future Scope

- Real-time market data integration
- Live competitor intelligence
- Advanced forecasting
- Database/API integration
- More specialized AI agents
- Automated recurring business reports
